"your innovation & creative partner"

Our Specialised Services includes the following

DRONE SURVEY & TRACKING

We keep your project on schedule with our continuous progress tracking. We provide our Clients with most accurate and updated information for project profiling and reporting purposes. We can produce any data reports in any format required i.e. PDF, CSV etc.

UNDERGROUND DETECTION

We assist our Clients in locating, tracing or inspection of subsurface infrastructure before any excavations can be done. Our equipment is capable of identifying underground services i.e. pipes, cables, tanks and any other objects buried underground.

CCTV PIPELINE INSPECTIONS

We specialise in blockage inspection to diagnose where the problem might be located. We further do the entire catchment survey to provide our clients with required survey data. Our CCTV equipment is capable of capturing data for population and preparation of CCTV pipeline surveys and pipe condition reporting. Our Team is proficient in the preparation of comprehensive CCTV reports.

LEAK DETECTION

We trace all types of leaks i.e. Water, Gas. We undertake most types of water leak detection that involves pressurised water, fire pipes, water pipes, waste pipes, stormwater pipes. We can also detect leaks on waterproofing in domestic, commercial, industrial, high-rise buildings, sports stadiums, housing estates and complexes.

LAND SURVEYING

We carry out our Topographical surveys using the latest Leica Robotic Total Stations, Leica Smartnet (Real-time GPS) and Drones to deliver to our clients a cost effective, highly accurate detailed survey. Our survey specifications are tailored to each client's needs, whether for local Planning Authorities, Architectural or Design Offices.
